

Dear Friends, Prayer Partners and Supporters:

In an effort to provide both food and a means of income for our people, we have an agriculture project, growing vegetables tended by those able to work, especially our Bible college students. Attached are videos of the crops.

We have one serious problem - WATER! Without irrigation capability, we are limited in what we can grow, the size of our crops, and the health of the plants. Dry spells can cause stunted growth, wipe out entire sections or even the entire fields.

To combat dry conditions, we desperately need to install a deep well to provide irrigation. We have gotten price quotes for this and it is rather costly. We are asking you to: (1) pray for this project and (2) help us financially if you are able, and as the Lord leads.

The cost is around \$14,000 to dig the well as quoted by well-drilling companies on the island. The first step is to sink the 570-ft deep well, then install the pump, solar panels, etc, which will cost another \$6,700, for a total of \$20,700. We sure would love to get this done before summer arrives, bringing heat and dryness. Our crops are looking good so far (see videos attached) and it would mean so much to our people if they thrive to harvest. They can sell or possibly export the vegetables, as well as feeding their own families.

If you are able to help financially, you can designate it as “water project” and send it to our mission board at:

Global Outreach Ministries, 80 Green Wood Ln, Springboro, OH 45066
